Hinoki Falsecypress

Chamaecyparis obtusa

Height: 50 feet

Spread: 20 feet

Sunlight: ○ ●

Hardiness Zone: 6a

Description:

One of the finer evergreens, generally spire-shaped with fine-textured foliage and interesting reddish bark, almost fibrous, becomes a very tall tree

Ornamental Features

Hinoki Falsecypress has dark green foliage. The scale-like leaves remain dark green throughout the winter. Neither the flowers nor the fruit are ornamentally significant. The shaggy indian red bark adds an interesting dimension to the landscape.

Landscape Attributes

Hinoki Falsecypress is an evergreen tree with a strong central leader and a distinctive and refined pyramidal form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance tree. When pruning is necessary, it is recommended to only trim back the new growth of the current season, other than to remove any dieback. It has no significant negative characteristics.

Hinoki Falsecypress is recommended for the following landscape applications;

- Accent
- Shade
- Vertical Accent

Planting & Growing

Hinoki Falsecypress will grow to be about 50 feet tall at maturity, with a spread of 20 feet. It has a low canopy with a typical clearance of 4 feet from the ground, and should not be planted underneath power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 70 years or more.

This tree does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This species is not originally from North America.
