Skinner's Gold Brome Grass

Bromis inermis 'Skinner's Gold'

Height: 12 inches

Spread: 3 feet

Sunlight: ○ ●

Hardiness Zone: 2a

Other Names: Broom Grass

Ornamental Features

Skinner's Gold Brome Grass' attractive grassy leaves are green in colour with showy yellow variegation. The foliage often turns tan in fall. The brown seed heads are carried on spikes in mid summer. The flowers are not ornamentally significant.

Landscape Attributes

Skinner's Gold Brome Grass is a dense herbaceous perennial grass with an upright spreading habit of growth. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This is a high maintenance plant that will require regular care and upkeep, and can be pruned at anytime. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Invasive

Skinner's Gold Brome Grass is recommended for the following landscape applications;

- Groundcover
- Naturalizing And Woodland Gardens

Planting & Growing

Skinner's Gold Brome Grass will grow to be about 12 inches tall at maturity, with a spread of 3 feet. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 10 years.

FEED & SEED INC.

This plant does best in full sun to partial shade. It is very adaptable to both dry and moist locations, and should do just fine under typical garden conditions. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. It is not particular as to soil type or pH, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selection of a native North American species. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
