Ornamental Features

Gold Coast Juniper is a dwarf conifer which is primarily valued in the garden for its broadly spreading habit of growth. It has attractive chartreuse evergreen foliage which emerges gold in spring. The scale-like sprays of foliage are highly ornamental and remain chartreuse throughout the winter.

Landscape Attributes

Gold Coast Juniper is a multi-stemmed evergreen shrub with a ground-hugging habit of growth. It lends an extremely fine and delicate texture to the landscape composition which should be used to full effect.

This is a relatively low maintenance shrub, and is best pruned in late winter once the threat of extreme cold has passed. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Gold Coast Juniper is recommended for the following landscape applications;

Ottawa West
2079 Carp Road
Ottawa, Ontario, Canada
K2S 1B9
Telephone: +1 613 836 6880

Ottawa East
1390 Windmill Lane
Ottawa, Ontario, Canada

Brockville
3043 County Rd. 29
Brockville, Ontario, Canada
K6V 5T4
Telephone: +1 613 341 9343

- Mass Planting
- General Garden Use
- Groundcover

Planting & Growing

Gold Coast Juniper will grow to be about 24 inches tall at maturity, with a spread of 5 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub should only be grown in full sunlight. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.
